UNITY GAME DEVELOPER

Unity Developer with 3+ years of experience building multiplayer systems and VR/AR applications, from prototype to published release. Track record of optimizing runtime performance and shipping scalable, cross-platform experiences. Brings a strong foundation in computer science and applied AI/ML, combining technical depth with a fast-learning, detail-oriented approach to game development.

PROFESSIONAL EXPERIENCE

Appsinnovate | Cairo, Egypt

Senior Unity Developer | Dec 2025 – Present

- Built AR experiences using AR Foundation and WebAR, delivered across mobile and browser.
- Designed learning experiences and mini-games for the e-content team, translating instructional goals into interactive gameplay.
- Maintained and supported published WebGL projects, resolving performance and compatibility issues post-launch.
- Added new features to live multiplayer titles and optimized performance, reducing load times and improving frame stability.

Genesis Creations | Cairo, Egypt

Mid-Level Unity Developer | Jan 2024 – Nov 2025

Junior Unity Developer | Nov 2023 – Dec 2023

- Designed and built 2+ multiplayer prototypes using Mirror and Photon PUN, covering networking, state sync, and session flow.
- Developed and maintained VR training solutions used for onboarding and compliance simulation.
- Integrated third-party SDKs and backend services into published games, ensuring stable production releases.
- Diagnosed and resolved performance and runtime issues using the Unity Profiler and Logcat.
- Architected custom shaders with Unity Shader Graph to support project-specific visual requirements.
- Implemented matchmaking and server allocation using PlayFab services for multiplayer sessions.
- Built GraphQL and REST API integrations to connect gameplay systems with backend data.
- Developed proof-of-concept projects in Unreal Engine to evaluate feature feasibility across engines.

EDUCATION & CERTIFICATIONS

- B.Sc. in Computers & Artificial Intelligence | Cairo University | GPA: 3.21 | 2023
- Machine Learning Specialization | Stanford University (Coursera) | 2022
- Game Development with C# and Unity | Colorado University (Coursera) | 2020

TECHNICAL SKILLS

Game Dev: Unity, Unreal, C#, C++, VR/AR SDKs, Shader Graph, Unity Profiler, Animator, URP

AI/ML: PyTorch, TensorFlow, NumPy, Pandas

Tools: Git, Firebase, PlayFab, ClickUp, SQL

Soft Skills: Agile Development, Mentoring, Technical Documentation

TECHNICAL PROJECTS

Sinai Heroes

- First-person shooter mobile game with 50k+ downloads, casting players as Egyptian army heroes in historical Sinai military operations.

VR-Connect

- VR training simulator that guides and evaluates medical staff on real-world procedures, including cleaning protocols and compliance standards.

Biohazard Breakout

- Multiplayer cooperative shooter-survival game featuring a hidden impostor mechanic.

Digito

- Digital twin of a real-world restaurant, letting users view, interact with, and access real-time data and objects virtually.

Ballpop!

- Fast-paced arcade game where players race to prevent balls from flooding the screen.

Graduation Project: Visualizing Novels Using Generative AI

- Used generative AI to create visual representations of novel scenes, implemented in Python with multiple AI libraries.
